Enough for Everyone

Sticky Knowledge

- For the very first settlers, finding the right place to settle was essential for survival, their four main areas of need were:
 - site - flat ground, easy to defend
 - aspect - sheltered from weather
 - resources - food and water supply, woods nearby for food and materials, fertile land
 - links - transport links
- Renewable energy is made from resources which nature can replace, it is more environmentally friendly as it does not pollute the air or water .
- Non-renewable energy is a source of energy that will eventually run out as it cannot be made as quickly as it is consumed, such as coal.
- Our food comes from all over the world. How far our food has travelled is called food miles. The further our food travels from where it is produced, the more CO₂ is likely to be released, contributing to climate change .

Geographical skills and fieldwork

- ◆ To describe and understand key aspects of human geography in the context of electricity generation and distribution.
- ◆ Investigating food miles using digital maps and fieldwork opportunities.
- ◆ Human geography in context of renewable and non-renewable energy sources.
