

What I should already know

- How weather changes depending on the season
- Night and day

Vocabulary

Weather	The weather includes the temperature outside, the wind direction as well as rain, cloud, sun and snow.
Temperature	The measure of how hot/cold something is.
Seasons	The parts a year is split into. There are 4 seasons ; Spring, Summer, Autumn and Winter.
Daylight	Daylight is when it is light outside. As the seasons change, the amount of daylight does. Days become shorter or longer.
Spring	The season in between winter and summer. The temperature starts to rise, daytime gets longer and leaves and plants begin to bloom
Summer	The season after Spring and before Autumn. The weather gets hotter. Days are longer and the nights are shorter. The trees are full of leaves and there are lots of flowers, bees and butterflies.

Working Scientifically

- Pupils should observe and talk about changes in the weather and the seasons.
- Pupils should be warned that it is not safe to look directly at the Sun, even when wearing dark glasses.
- Make tables and charts about the weather

Sticky Knowledge

- Observe and describe the changes across **spring** and **summer**
- Observe and describe **weather** associated with the four seasons.
- Observe and describe the **temperature** associated with the seasons.
- How the length of the day varies
- The year is split into four seasons
